ONE DAY

# "Creating Competent Engineers and Entrepreneurs"

May 2017

"India has enviable student strength in technology-related disciplines and this intellectual wealth if leveraged can create economic value in terms of innovation and entrepreneurship. Our country has the third largest start-up ecosystem in the world. We can improve our position if the start-up ecosystem in our technical education system is strengthened to create college start-ups that can eventually become enterprises"

ANIL D.SAHASRABUDHE

Consortium of Self-Financing Professional, Arts and Science Colleges in Tamil Nadu

"India has enviable student strength in technology-related disciplines and this intellectual wealth if leveraged can create great economic value in terms of innovation and job creation. Our country has the third largest start-up ecosystem in the world. We can strengthen our education system if the start-up ecosystem is strengthened. Our technical education system has been weakened by the college start-up ecosystem which can eventually become successful enterprises."
